COOLING CHARGING STAND

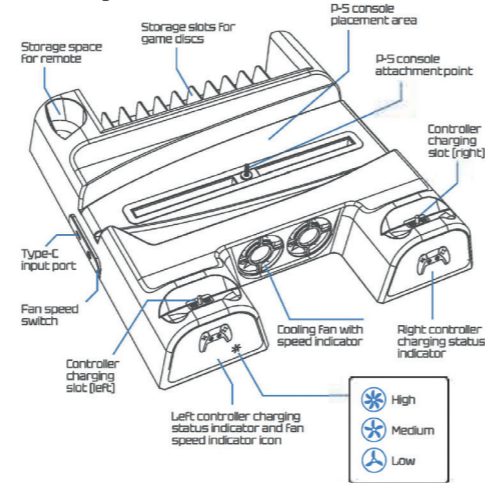

## Product introduction

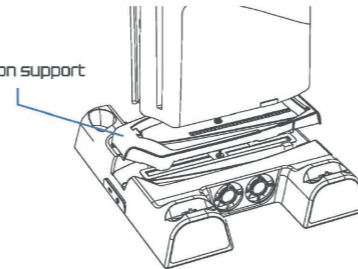

This product is a new intelligent multifunctional cooling stand, which can dissipate heat for the P-5 console, charge two P-5 controllers at the same time, store 11 game disc boxes, and store a console remote. The fans have blue indicators and white icons. By taking power from the Type-C port of the P-5 console with a dedicated charging cable, it can be used normally without the need to purchase other power sources separately, making it practical and more convenient to use.

## Product Function and Installation Diagram

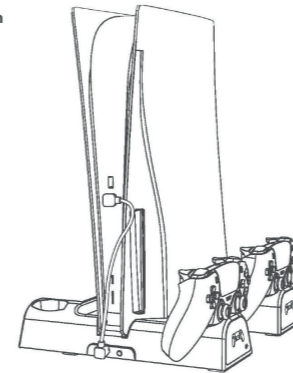

### 1. Function Diagram

### New Extension support

### 2. Installation Diagram

2.1. Place the product on a well-ventilated platform. The cooling stand is compatible with the CFI-1000A and CFI-1000B P-5 consoles. Install the console vertically into the slot on the embedded stand, and attach the console to the cooling stand using the screw.

2.2. Insert the Type-C connector for the power cable into the Type-C input port of the P-5 console for the power source.

2.3. The controller can be charged after installation: the P-5 controller faces forward and can be charged after being inserted into the left or right charging slot.

## Function Description

- Type-C input port.
- Fan speed switch: It can control turning the fan on and off, adjust the fan speed, and the working state of the fan will change each time you press the switch: High - Medium - Low - OFF. The fan will be in high-speed working state by default once powered on.
- Cooling Fan: There are 2 high-speed fans in the product, which can speed up the air circulation inside the console to achieve the purpose of heat dissipation.
- The fan speed indicator is blue: Used to adjust fan speed, switch between the different speeds quickly and easily. As you switch between the different fan speeds, the fan lights will also brighten, indicating the current speed, and the indicator goes out after turning off the fan.
- The fan icon displays white light: The "High/Medium/Low" fan speed is displayed with white light on three different icons, and the icon goes out after turning off the fan.
- Charging slot: Used to charge two P-5 controllers at the same time; charging will start after inserting the P-5 controller into the left [right] charging slot as the picture shows.
- Charging indicator: Used to indicate the charging status of the controller:
  - After the stand is powered on, the controller icons in the display window will turn blue. Place the controller on the left [right] slot for charging, and the corresponding left [right] controller display window will turn red immediately; when the charging is completed, the display will turn blue again.

- When not connecting the P-5 controller to the console for charging: The charging indicator on the controller will display an orange breathing light; when the charging is completed, the charging indicator will turn off.
- When the P-5 controller is successfully connected to the console for charging: The charging indicator on the controller will display a steady white light; if you charge the controller while playing games, the indicator will display a steady blue and white light.
- Note: To maximize the lifespan of the P-5 controllers, please do not remove the controllers while they are being charged. When the battery level of the controller reaches 80% or above, if you disconnect the controller from the charger and attempt to reconnect it again, it will not be able to continue charging due to the battery protection features of the P-5 controller. The controller will continue to charge only after the battery level falls below 80%.

## Technical Parameters

- Input voltage: DC 5V
- Input current: 3A
- Controller charging voltage: DC 5.1V
- controller charging current: 1000mA\*2
- Fan speed: 4500±10% rpm
- Charging time: about 3 hours
- Product size: 284\*268\*52 mm [length\*width\*height]
- Product material: ABS

Note: For the above parameters, our company reserves the right to modify the design or specifications without prior notice.

## Product Accessories

- 1 x Type-C charging cable
- 1 x P-5 connecting screw

Note: The accessories are subject to increase or decrease without additional notice in this manual.

## Precautions

- Please place the stand somewhere horizontal and well-ventilated during use.
- In order to ensure normal operation of the stand, please use the dedicated charging cable for the base to connect to the P-5 console.
- The stand is for ventilating and heat dissipating, do not block the vents on any side when you use it.
- Do not insert any objects [especially metal parts] into the heat hole, as this may cause a short circuit in the cooling stand and consequently damage the product.
- When cleaning the product, please use a dry cloth to wipe it. Do not wipe the base with water or alcohol, as this may result in water or alcohol flowing into the base along the heat dissipating holes, causing a short circuit of the base.
- When cleaning the product, please disconnect it from the console or input power supply.
- If you don't use the product for a long time, please unplug the peripherals and input plugs on each port connected to the stand. Do not store or use it in a humid or hot environment.
- If this product is exposed to rain, water immersion, or is broken, please stop using it and deliver it to a specialized maintenance department for timely repair. Do not disassemble it by yourself. Keep away from small children due to potential shock and cutting hazards.
